

Ipswitch Offers a Hosted Email Solution

Augusta, Georgia – August 25, 2010 – Ipswitch, Inc., the maker of IMail Server, just launched Ipswitch Hosted Email, a cloud-based Windows email server that gives businesses a low-cost alternative to Hosted Exchange. As a recognized leader in the messaging market for more than 15 years, Ipswitch combines its mail server expertise with the evolving technology of a cloud infrastructure.

With Ipswitch Hosted Email, businesses enjoy the financial predictability that comes with a hosted solution without losing peace of mind over security and reliability. “We understand that businesses are looking for more than just a simple hosted email solution,” says Tripp Allen. “Businesses want a trusted business partner with financial stability, industry expertise, and a proven track record of outstanding technical support.”

With Ipswitch Hosted Email businesses have their own Virtual Private Server (VPS) ensuring that valuable business data remains secure, isolated and backed up nightly. Other security features include Commtouch Premium anti-spam, integrated anti-virus powered by BitDefender, encrypted instant messaging and DKIM/DomainKeys authentication.

Ipswitch Hosted Email provides a full featured mail server for businesses. According to Allen, “This is not a basic hosted email service. We are providing a complete business solution.”

With Ipswitch Hosted Email, businesses can:

- Continue to use Microsoft Outlook®
- Utilize mobile synchronization with Exchange ActiveSync®
- Leverage Exchange-like collaboration
- Integrate Ipswitch Hosted Archiving for regulatory compliance and eDiscovery
- Eliminate the need for multiple providers and various licenses.

“This offering is ideal for businesses that need to do more with less. We are providing the functionality you would expect from an on-premise server in a convenient hosted service,” adds Allen.
